

Junior Full Stack Developer

Utopian Future Technologies is a fast growing startup developing software for **DRT, Demand Response Transportation**. We break free from traditional public transportation concepts and offer solutions that adapt to customer demand while being efficient and economic at the same time.

Do you want to join us in solving ever increasing **traffic problems** and reduce their negative impact on our well-being and the environment?

In order to help us implement new features for our web application, we are looking for a full stack developer who can implement new user interface components in **typescript** and **react** and implement the supporting code on the backend side in **java** and **SQL**. Your responsibilities will be fluid and can evolve over time in accordance to company needs and personal preferences.

You should have some experience with modern javascript and frameworks like vue, react or angular, understand browsers and how they interact with webservers using HTTP/HTTPS. A good understanding of modern css and html is required. In addition to classical programming, you should be familiar with **GNU/Linux administration** and deployment of web applications and database servers. Knowledge of up-to-date devops methods (ansible, docker, shell scripting, python) and networking is considered a plus.

You will be part of our team of experienced software developers. Using state of the art software development tools such as **git**, automated **testing**, bug trackers, **CI**, **debuggers** etc. should be your standard approach.

Since we operate in a highly competitive market, being reactive to new requirements is of great importance. We expect you to be curious about new developments in UI programming and general software development and the field of demand responsive transportation. You should question dubious decisions and be proactive in suggesting changes to the benefit of your colleagues, our customers and yourself.

We can offer you a challenging job in an international, friendly and highly motivated team of around fifteen people. We are conveniently located in the center of Luxembourg City, the cozy, yet cosmopolitan heart of Europe. By challenging we don't mean chronic overtime and little pay but rather hard but interesting problems and the opportunity to make a difference.

Send us your résumé and motivation letter to jobs@uft.lu. We are looking forward meeting you.
